PUMP TYPES

T&E Pumps offer a variety of different pumps. Customers have the option of rubber, steel or bronze gears. Pumps range in size from large to small-body as well as right angle or straight through. Nitrided housing pumps are available for pumping acid. Each pump is made with the customers hauling needs in mind, and we are happy to make any changes necessary to comply with unique requests.

4000 SERIES PUMPS

T & E cast housing with 4" Inlet and outlet and option of steel or rubber 6" gears, bushing caps for easy accessibility to the inside of the pump. For increased stability when running in higher pressure combo caps can be used (this stability comes from the lock collar bearing set after the 2.5" bushing).

4000R SERIES PUMPS

T&E 90 degree cast housing with 4" inlet and outlet and 7.5" steel gears. This pump is also available with combo caps only.

4100 SERIES PUMP

T&E cast housing with 4.5" Inlet & outlet and 7.25" steel gears for use when higher volumes of fluid need to be transferred. Available with either bushing/ combo caps.

OUTBOARD GEAR DRIVEN PUMP

An external front drive gear assembly that is timed so internal gears do not touch therefore creating less wear is added to our 4000 or 4100 T&E Pump.

These pumps are superior when used where sand or abrasive liquids are a problem. Available as either a 4000 or a 4100 series straight thru with steel gears complete with a T & E Oil Lubrication System for reduced maintenance.

T&E OIL LUBRICATION SYSTEM

Can be installed on any of our T&E Pumps eliminating greasing therefore reducing maintenance.

T & E PUMPS LTD.

T&E Pumps is an Alberta based business located near Consort, specializing in pump manufacturing, change-over and repair.

The pumps have been developed for the consumer.

Having once owned a busy trucking company of our own, we have had first hand experience with the needs and demands of today's transport companies.

The goal of T&E Pumps is to make sure the customer has the best product to suit the job at hand. We do this by offering a variety of pumps, suited to each individual's needs.

All pumps are assembled in our full service shop. We have equipment that allows us to do our own custom machining and repairs.
